

Extending the Possibilities

Environmental Policy

Silcotec Europe (SK) s.r.o. aims to achieve the highest standards of environmental performance under the agreed scope of the registration in the interest of all the stakeholders.

Silcotec Europe (SK) s.r.o. reiterates its commitment to pollution prevention.

By preparing and implementing environmental policies and programmes and by regularly reviewing key environmental data at senior management level, we will administer a continuous improvement programme designed to minimise the impact of our operations on the environment.

The environmental implications of introducing new processes and products will be carefully evaluated and waste avoidance and waste reduction initiatives will be vigorously pursued.

Materials and energy used in the manufacture of products will be carefully conserved by minimising customer complaints. This will be achieved through systemized training, and maximising the recycle of materials.

We will ensure that we are in compliance with all applicable legal and other requirements in caring for the environment.

Our commitment to the environmental policy will be subject to regular assessment and will be projected into the environmental aims, which are determined by company management.

Stephen Bullock

Managing Director and CEO, 01/2/2008
